FYP REPORT WRITING GUIDELINES

GENERAL GUIDELINES

This document is to be read together with the seminar slides.

1. A final year project report is an intellectual work for the university. Thus, the written report must be in formal English.
2. Avoid using daily language for the report. For example, do not use the word “I” in the report, instead use third person forms (e.g., the developer, the researcher).

For example:

Use of Daily Language: (Wrong)

I have come to conclusion that the system works well with Linux operating system.

Use of Formal Words: (Correct)

The researcher concludes that the system works well with Linux operating system.

3. Any idea, word and reference cited from the Internet, published paper, journal and book must be clearly stated by the original author. All work is considered plagiarism if you failed to provide any form of reference (In-text citation or reference list) for the report, which resulted in an F grade or dismissal from the university.
4. Any term (acronym) used in the report must be clearly defined in full words in the early chapter (including glossary page) and then follow with the repeated term in other chapters.

For example:

The web assessment application (WAA) provides a mechanism to control lab tests and quizzes. The WAA has the full capabilities to prevent cheating in formal tests.

5. Any diagram, figure and table used in the report must be clearly stated/labelled based on the chapter and follow with the title.

For example:

Chapter 3, first figure the label must be “Figure 3.1 Client-Server Interaction.” Chapter 3, second figure the label must be “Figure 3.2 Client Interaction.”

6. Move any topic/heading or subtopic/subheading at the bottom of the page without any content to the new page.
7. The report should have a continuity from one chapter to another; make sure there is a consistency of content flow for the report.

TYPES OF FINAL YEAR PROJECTS

System Development

- a. Types
 - i. Web Application
 - ii. System/Desktop/Tablet Application
 - iii. Mobile Application
 - iv. Cloud Application
- b. Platforms
 - i. Windows
 - ii. OSX
 - iii. Linux
 - iv. Android
 - v. IOS
 - vi. Windows Phone

2. Multimedia

- a. Types
 - i. Digital Storytelling
 - ii. E-Learning Application
 - iii. Game Development
- b. Platforms
 - i. Desktop
 - ii. Mobile

CHAPTER 1

INTRODUCTION

(System Development, Digital Storytelling, E-Learning Application, and Game Development)

1.0 PREAMBLE

(System Development)

The selected organization that you have decided to create/automate/enhance/upgrade its current system/mobile application and contribution to your final year project development. For example, if you choose to develop a class scheduling for the department of Information Systems, you need to provide a brief description about the department itself.

(Digital Storytelling, E-Learning Application, and Game Development)

The organization that you have identified needs interactive learning/media/audio visual to simplify user tasks. For example, if you choose to develop a digital learning tool for learning Arabic interactively for CELPAD, you need to provide a brief description about the Arabic department at CELPAD.

(One paragraph only)

1.1 PROBLEM DESCRIPTION

Overview statements or subject of introductory to this subtopic.

1.1.1 Background of the problem

(System Development)

Based on the conducted interview and users' clarification of the current system. Discuss the problems that the users are currently having with the manual system.

(Digital Storytelling, E-Learning Application, and Game Development)

Based on the conducted interview and users' clarification of the current storytelling/info. Discuss the problems that the users are currently having with the current product or situation.

1.1.2 Problem Statement

(System Development)

Describe the specific problems that the users are currently having with the current system. The problems resulted from manual or inefficient system in terms of implementation (system architecture, network, paper-based system, etc.)

(Digital Storytelling, E-Learning Application, and Game Development)

Describe the specific problem that the users are currently having with the current product. The problems resulted from lacking society benefits/elements, features, Islamic components, etc.

1.2 PROJECT OBJECTIVE

Overview statements or subject of introductory to this subtopic.

(System Development, Digital Storytelling, E-Learning Application, and Game Development)

What are the main purposes of developing the proposed system/product? Describe the solution/answer to your problem statement(s).

1.3 PROJECT SCOPE

Overview statements or subject of introductory to this subtopic.

1.3.1 Scope

(System Development)

Define the system area and entities of the project. For example, if you create a class scheduling system for KICT, the scope of the project will be students, facilities, and courses, which are within KICT.

(Digital Storytelling, E-Learning Application, and Game Development)

Describe the product area and entities of the project. For example, learning Arabic for PRSS student at CELPAD, the scope of the project will be students, facilities, and courses within CELPAD.

1.3.2 Target Audience

(System Development)

Describe in detail the organization of the department including the users and their job position. The details must focus on the actual users of your system. For example, the facilities officer will use a class scheduling system for scheduling and monitoring. Thus, include the description of facilities officer in this section.

(Digital Storytelling, E-Learning Application, and Game Development)

Describe your target audience such as age group (e.g. age 10 to 12), state (Selangor, Terengganu, etc.), country (Malaysia, Sri Lanka, Bosnia, Pakistan, etc.), gender, etc.

1.3.3 Specific Platform

(System Development, Digital Storytelling, E-Learning Application, and Game Development)

Specification of hardware and software for project development and ideal system requirement to run your system for target users. The specifications include operating system, computer memory, network, processor power, etc.

1.4 CONSTRAINTS

Overview statements or subject of introductory to this subtopic.

(System Development, Digital Storytelling, E-Learning Application, and Game Development)

Project limitations such as uncooperative user, high cost of hardware and software requirements, etc. Reasons for exclusion of certain features. Do not include time constraint! (This indicates that you are doing your work at the last minute).

1.5 PROJECT STAGES

(System Development, Digital Storytelling, E-Learning Application, and Game Development)

Explain the proposed milestones (weekly plan) for your project development and a brief explanation for each milestones (Gantt chart).

(Use Microsoft Project or other software that can generate a proper Gantt chart).

1.6 SIGNIFICANCE OF THE PROJECT

(System Development, Digital Storytelling, E-Learning Application, and Game Development)

Explain the benefits of the project to the target users, the contributions to society and Islam. Provide at least five (5) benefits of the project. (You can use point or bullet form to state the significance of the project).

1.7 SUMMARY

(System Development, Digital Storytelling, E-Learning Application, and Game Development)

Summarise or conclude the all the important points in this chapter.

(One paragraph only)

CHAPTER 2

LITERATURE REVIEW

(System Development)

2.1 INTRODUCTION

Discuss the importance of literature reviews for your project. This contributes to the preliminary research or survey (general requirements/features) towards completing the project.

2.2 SYSTEM REVIEW

Overview statements or subject of introductory to this subtopic.

2.2.1 Existing System

Discuss [at least three \(3\) existing products](#) on the market or products that exist within the organization. You need to provide detailed screenshots for the existing products together with the information of the developer. If the products are currently available on the Internet, please include their URLs.

[Use an APA citation for the product/system review \(Developer/Company, Year of release\).](#) For example (Facebook, 2016). Refer to APA Style for details.

2.2.2 Advantages

Discuss the advantages of the selected products and describe them in detail. Please provide relevant screenshots.

[\(Compare each of the products\)](#)

2.2.3 Disadvantages

Discuss the disadvantages of the selected products and describe them in detail. Please provide relevant screenshots.

[\(Compare each of the products\)](#)

2.3 DISCUSSION

Include the comparisons in a table.

Table 2-1 A Table

Based on advantages and disadvantages listed in the table, discuss which existing features and improvements that you want to include in your project.

FYP REPORT WRITING GUIDELINES

CHAPTER 2

LITERATURE REVIEW

(Digital Storytelling, E-Learning Application, and Game Development)

3.0 INTRODUCTION

Discuss the importance of literature reviews for your project. This contributes to the preliminary research or survey (general requirements/features) towards completing the project.

3.1 SYSTEM REVIEW

Overview statements or subject of introductory to this subtopic.

3.1.1 Existing System

Discuss [at least three \(3\) existing products](#) on the market or products that exist within the organization. You need to provide detailed screenshots for the existing products together with the information of the developer. If the products are currently available on the Internet, please include their URLs.

[Use an APA citation for the product/system review \(Developer/Company, Year of release\). For example \(Facebook, 2016\). Refer to APA Style for details.](#)

3.1.2 Advantages

Discuss in detail the advantages of the selected digital storytelling/e-learning application/game products. Please provide relevant screenshots.

[\(Compare each of the products\)](#)

3.1.3 Disadvantages

Discuss in detail the disadvantages of the selected digital storytelling/e-learning application/game products. Please provide relevant screenshots.

[\(Compare each of the products\)](#)

3.2 DISCUSSION

Include the comparisons in a table.

Table 3-1 A Table

Based on advantages and disadvantages listed in the table, discuss which existing features and improvements that you want to include in your project.

FYP REPORT WRITING GUIDELINES

CHAPTER 3

METHODOLOGY

(Pre-Production of System Development)

4.0 INTRODUCTION

Explain in general the purpose of this chapter and its significance to the analysis and design of your project.

(One paragraph only)

4.1 DEVELOPMENT APPROACH

State in detail the development approach that you used to develop the system. This can either be extreme programming, agile software development, rapid prototyping, and unified software process. State your reason for choosing that approach and its relation to your project.

(Refer to System Development Methodology)

4.2 REQUIREMENTS SPECIFICATION

For user requirements specification, you can use any of the method below to gather user requirements. This includes all possible users (end users, system admin, system owner, etc.) for the project.

(Refer to INFO 2304 (SAD) – Requirement Gathering chapter)

- Survey questionnaire
- End user, system user interview
- Forms documentation
- Existing system, application, or database
- Research and site visit
- Observation
- Prototyping

For technical system requirements, you can write your analysis of the user requirements in general use case development and including some non- functional requirements for the system (e.g. performance, information, economy, control and security, efficiency, service for hardware and software).

Explain in detail each of the features or functions that the user has agreed to include as part of the system or the proposed features or functions to be included in the system.

4.3 LOGICAL DESIGN

Overview statements or subject of introductory to this subtopic.

4.3.1 System Analysis and Design Diagram

Specify and create details flow chart for all the functions and features. Provide a list of diagrams based on functions or modules. Below are the list of diagrams needed (as applicable) for this section:

- a. System Architecture (block diagram to show the entire system input, processing/application and storage/database, network connectivity, hardware or interface specification).
- b. Use Case Diagram (Show interaction between system and user / capture business scenario).
- c. Use Case Narrative (Detail explanation of the interaction between system and user / capture business scenario).
- d. Activity Diagram (Business process flow – Details flow chart).
- e. Sequence Diagram (Interactions between objects).
- f. Class Diagram (Physical/system design phase and a class diagram can be translated to an ERD).
- g. Package Diagram (How the classes are organized into package (related with item and interdependencies of those packages)

Note:

Lists (f) and (g) are more meaningful if a student is using Object-Oriented Programming language such as Java, C++, and C #.

[\(Use Star UML, Microsoft Visio, Draw.io or any software design utilities\)](#)

4.3.2 Data Flow Diagram (if applicable)

Specify and display data flow diagram begins with context diagram, DFD level 0 and DFD level 1 based on features, functions, and data flow of your system. This would include the input and output of the data. Provides a list of diagrams based on functions or modules.

4.4 DATABASE DESIGN

Specify the overall entity relationship diagram (ERD) for database tables that are required for the system. Provides every table with a list of attributes and data type.

4.5 USER INTERFACE/PROTOTYPE DESIGN

Provide the details navigation or page flow of your system starting from login until the user signs out (e.g. dialogue chart). Include details of the screen design and reports layout.

(Refer to INFO 2304 (SAD) - Input & output design & HCI chapters)

4.6 SUMMARY

Summarise the content of this chapter.

CHAPTER 3

METHODOLOGY

(Pre-Production of Digital Storytelling)

5.1 INTRODUCTION

Explain in general about this chapter and its significance to the analysis and design of your digital story.

(One paragraph only)

5.2 REQUIREMENT SPECIFICATIONS/DATA COLLECTIONS

For user requirements specification, you can use any of the methods below to gather user requirements. This includes all possible users for the project.

(Refer to INFO 2304 (SAD) - Requirement Gathering chapter)

- Survey questionnaire
- End user, application user interview
- Research and site visit
- Observation

5.2.1 The Findings

Report the descriptive analysis of your data collection findings. You may use statistical tools (such as Excel or SPSS) to generate the visual results in the form of a table or chart.

Explain in detail each of the features or functions that the user has agreed to include as part of the system or the proposed features or functions to be included in the system.

5.3 CONCEPTUAL DESIGN

The design stage comprises of the following activities:

- The concept of the story
- The theme
- The Islamic value/da'wah

5.4 STORY STRUCTURE

Describe your digital story. Your story must have a beginning, the middle and the ending, as well as character(s) and background design.

5.4.1 Story Plot/Script

Describe in detail your story plot, role of all the characters involved, etc.

5.4.2 Character Design

Describe in detail each of your characters, including antagonist/protagonist character (if any). Please provide a sketch of model sheet for each character.

5.5 STORYBOARD

Provide scene-by-scene descriptions accompanied by a storyboard. Your storyboard must include drawn out scenes, dialogue and multimedia elements embedded (e.g. audio or video).

CHAPTER 3

METHODOLOGY

(Pre-Production of E-Learning Application)

3.0 INTRODUCTION

Explain in general about this chapter and its significance to the analysis and design of your e-learning application.

(One paragraph only)

3.1 DEVELOPMENT APPROACH

State in detail the development approach that you used to develop the application for e-learning. This can either be ADDIE (classic model), ASSURE model, Rapid ISD Model, Successive Approximation Model (SAM) or any other suitable model. State your reason for choosing that approach and its relation to your project.

3.2 REQUIREMENT SPECIFICATION/DATA COLLECTIONS

For user requirements specification, you can use any of the methods below to gather user requirements. This includes all possible users for the project.

(Refer to INFO 2304 (SAD) – Requirement Gathering chapter)

- Survey questionnaire
- End user, application user interview
- Research and site visit
- Observation

3.2.1 The Findings

Report the descriptive analysis of your data collection findings. You may use statistical tools (such as Excel or SPSS) to generate the visual results in the form of a table or chart.

Explain in detail each of the features or functions that the user has agreed to include as part of the system or the proposed features or functions to be included in the system.

3.3 THE NEEDS ANALYSIS

The purpose of conducting the needs analysis to determine whether:

- The learning application is required to fill a gap in public/student/professional knowledge and skills.
- E-learning is the best solution to deliver knowledge/training.

The needs analysis allows the identification of general, high-level course goals.

Target audience analysis is a crucial step. The design and delivery of e-learning will be influenced by key characteristics of the learners (e.g. their previous knowledge/skills, geographical provenance, learning context and access to technology).

Analysis also is needed to determine the course content:

- Task analysis identifies the learning tasks that learners/users should follow to improve their knowledge and skills that need to be developed.
- Topic analysis is carried out to identify and classify the course content. This is typical of those courses that are primarily designed to provide information.

3.4 THE APPLICATION DESIGN

The design stage encompasses the following activities:

- Formulating a set of learning objectives required
- Defining the order in which the objectives should be achieved (sequencing)
- Selecting instructional, media, evaluation and delivery strategies

The outcome of the design stage is a blueprint that will be used as a reference to develop the course. The blueprint illustrates the curriculum structure (e.g. college/school courses, topics, lessons, activities).

3.5 CONTENT DEVELOPMENT

Writing or collecting all the required knowledge and information.

3.6 NAVIGATION FLOW OF THE APPLICATION

Provide the details navigation or page flow of your system starting from login until the user signs out (e.g. dialogue chart).

3.7 STORYBOARD

Integrating instructional methods (all the pedagogical elements needed to support the learning process) and media elements. Storyboard is a document that describes all the components of the final interactive products, including images, text, interactions, and assessment tests.

CHAPTER 3

METHODOLOGY

(Pre-Production of Game Development)

3.0 INTRODUCTION

Explain in general about this chapter and its significance to the analysis and design of your game.

(One paragraph only)

3.1 DEVELOPMENT APPROACH

State in detail the development approach that you used to develop the whole project. State why you choose the approach and its relation to your project.

(Pre-production stage, production stage and post-production stage)

3.2 STRUCTURE

Describe your game. Your game must have the beginning, the middle and the ending, as well as character(s) and background design.

3.2.1 Story Plot

Describe in details your story plot, theme, etc.

3.2.2 Character Design

Describe in detail each of your character. Please provide a sketch of model sheet for each character.

3.3 STORYBOARD

Provide scene-by-scene descriptions accompanied by a storyboard. A storyboard must include drawn out scenes, dialogue and special effects.

CHAPTER 4

PROJECT DEVELOPMENT, IMPLEMENTATION AND EVALUATION

(Production and Post-Production of System Development)

4.0 INTRODUCTION

Briefly describe the chapter and the completed project (final product).

4.1 SYSTEM INTEGRATION

This part must include the main page or main website for the system, and it must be a screenshot of the main system. For a group project, you need to combine and complete the whole system.

4.2 SYSTEM OUTPUT

Preface statements or subject of introductory to this subtopic.

4.2.1 Administrator

Screen shots for all administrator functions or modules.

4.2.2 User(s)

Screen shots for all users' functions and modules.

4.3 SYSTEM TESTING

Preface statements or subject of introductory to this subtopic.

4.3.1 Test Plan

State the test plan and activities involved and draw a conclusion from the test plan and state the comments given by the users (e.g. User Acceptance Test (UAT), etc.).

4.3.2 Enhancement

Based on user testing, what are the functions and modules that need improvement?

CHAPTER 4

PROJECT DEVELOPMENT, IMPLEMENTATION AND EVALUATION

(Production and Post-Production of Digital Storytelling)

5.0 INTRODUCTION

Briefly describe about the chapter and the final product of the project. This stage focuses on the production of the project's content. The content can vary considerably, depending on the available resources (e.g. the combination of various media such as animation and video).

5.1 FINAL COMPOSITION (Production)

Explain the development of media and interactive components.

5.1.1 Digitizing Art

Existing icons, buttons, photographs, illustrations, and graphics are digitized for use in an electronic medium. Electronically generated art as well as digitized art must be ready for use. These include the number of colours, palettes, resolution, format, and size that need to be addressed.

(Require Screenshots)

5.1.2 2D/3D Modelling and Animation

Describe the production of 3-D artwork through the selected authoring tool (rendering, preparing for production of 3-D artwork). 3-D animation development needs to follow the story flow in the storyboards and scheduled period in the Gantt chart.

(Require Screenshots)

5.2 RECORDING AND DIGITIZING AUDIO

Explain the voice-over process (or a composer, if music is used) to be embedded in the project (application), performers and time schedules after the recording session is scheduled.

5.3 IMPLEMENTATION

This stage focuses on project (application) delivery to the users. The rendered application is now accessible to users (e.g. installed on a server). Elaborate the process of producing the application in the chosen formats:

- CD-ROM
- Web
- Mobile
- Etc.

Explain the reason for the selected delivery format.

5.4 EVALUATION/TESTING (Post-Production)

Overview statements or subject of introductory to this subtopic.

The evaluation of digital storytelling project is done through alpha and beta testing for specific evaluation purposes. You may want to evaluate:

- Learners' reactions.
- The achievement of learning objectives.
- The transfer of knowledge and skills.
- The impact of the project on the organization.

5.4.1 Test Plan

State the test plan and activities involved. Write a conclusion from the test plan and state the comments given by the users.

5.4.2 Enhancement

Based on user testing, what are the elements that need improvement?

CHAPTER 4

PROJECT DEVELOPMENT, IMPLEMENTATION AND EVALUATION

(Production and Post-Production of E-Learning Application and Game Development)

6.1 INTRODUCTION

Briefly describe the chapter and the final product of the project.

This stage focuses on the production of project's content. The content can vary considerably, depending on the available resources (e.g. the combination of various media such as animation and video).

6.2 APPLICATION DEVELOPMENT (Production)

Explain the development of media and interactive components.

6.2.1 Digitizing 2D/3D Art

Digitization of all the characters for electronic medium. Electronically generated art as well as digitized art must be prepared for implementation. These include the number of colours, palettes, resolution, format, and size that need to be addressed.

(Require Screenshots)

6.2.2 Digitizing Scenes

The whole storyline should be transformed into visual format (digital) according to the storyboard.

(Require Screenshots)

6.2.3 Recording and Digitizing Audio

Explain the voice-over process (or a composer, if using music) to be embedded for the application, performers and time schedules after which the recording session is scheduled.

6.2.4 Authoring

All the pieces come together in the authoring tool. Functionality is programmed, and 2-D animation is developed. At this stage, the final working product is created.

(Require Screenshots)

6.3 IMPLEMENTATION

This stage focuses of project (application) delivery to the users (learners). The rendered application is now accessible to users (e.g. installed on a server). Elaborate the process of producing the application in the chosen formats:

- CD-ROM
- Web
- Mobile
- Etc.

Explain the reason for the selected delivery format.

6.4 EVALUATION/TESTING (Post-Production)

Overview statements or subject of introductory to this subtopic.

The evaluation of the project is done through alpha and beta testing for specific evaluation purposes. You may want to evaluate:

- Users' reactions.
- The achievement of storytelling objectives.
- The transfer of knowledge and skills.
- The impact of the project on the organization.

6.4.1 Test Plan

State the test plan and activities involved. Write a conclusion from the test plan and state the comments given by the users.

6.4.2 Enhancement

Based on user testing/comments, what are the elements that need for improvement?

**FOR INFO 4402 (FYP2) ONLY. PLEASE REMOVE FROM INFO 4401 (FYP1)
REPORT**

CHAPTER 5

CONCLUSION

(System Development, Digital Storytelling, E-Learning Application and Game Development)

7.0 PROJCT REQUIREMENT

State the completed and uncompleted requirements for your project. Refer to chapter 3.

Explain why the requirements are not completed.

7.1 PROJECT CONSTRAINT

State the limitations of the project and explain why. For example, a mobile app that uses internal storage would not be able to share data with other users. **Do not include time constraint!** (This indicates that you are doing your work at the last minute).

7.2 FUTURE ENHANCEMENT

What are the modules, functions, features, or system capabilities that need improvements in the future? State them in this section. This will allow other students to extend or implement the stated enhancements in the future.

7.3 CONCLUSION

Summarize the important points, the limitations and enhancements for the project.

REFERENCES AND GUIDELINES

- i. An APA citation (in-text and reference list) is required for the report. Details on various citation formats can be referred at Purdue Online Writing Lab:

<https://owl.purdue.edu/owl/index.html>

- ii. You may use Mendeley as your referencing tool:

<https://www.mendeley.com/>

<https://www.youtube.com/watch?v=OzFHGFnAM2Q>

FYP REPORT WRITING GUIDELINES

REPORT FORMAT GUIDELINES

- i. Please refer to the FYP REPORT TEMPLATE.
- ii. For [INFO 4401 \(FYP 1\)](#), Here is the content for the report.
 - COVER PAGE
 - ABSTRACT
 - TABLE OF CONTENTS
 - LIST OF TABLES
 - LIST OF FIGURES / ILLUSTRATIONS
 - LIST OF ABBREVIATIONS / SYMBOLS
 - CHAPTER 1 INTRODUCTION
 - CHAPTER 2 LITERATURE REVIEW
 - CHAPTER 3 METHODOLOGY
 - REFERENCES
 - APPENDICES - Gantt chart to be included as Appendix.
 - GLOSSARY - Definition of Terms and Abbreviations (if needed)
 - INDEX (if needed)
- iii. For [INFO 4402 \(FYP 2\)](#), Here is the content for the report.
 - COVER PAGE
 - ABSTRACT
 - TABLE OF CONTENTS
 - LIST OF TABLES
 - LIST OF FIGURES / ILLUSTRATIONS
 - LIST OF ABBREVIATIONS / SYMBOLS
 - CHAPTER 1 INTRODUCTION
 - CHAPTER 2 LITERATURE REVIEW

For INFO 4401 (FYP1), students are required to write a report according to the above format and 100% completion of interface/prototype design. This format is just a guideline, but your supervisor has the right to determine the actual contents of the report.

This subject requires rigor readings, writings and weekly consultancy with supervisor. Students will have another semester for system development and multimedia production for INFO 4402 (FYP 2).

FYP REPORT WRITING GUIDELINES

GENERAL REPORT FORMAT GUIDELINES

1.0 Language

The language of the project paper is English.

2.0 Font Size and Type

Students **MUST** use Arial. Other fonts are **NOT ACCEPTABLE**.

Font Size:

- For Headings and subheadings, use 12-point font.
- For Table of Contents, use 11-point font.
- For Text, use 11-point font.
- For Tables and Figures, use 11-point.
- For Footnotes, use 9-point font.

Please type in **bold** for headings and subheadings. **Headings** must use all **upper case** letters, and **sub-headings** must use **upper and lower case letters**.

3.0 Line spacing

The project report should be written on single sided page. Line spacing is 1.5 lines for the text, with single-spacing for exceptional circumstances only:

- Footnotes
- Long headings or subheadings
- Long captions to tables, or figures
- References
- Appendices
- Tables
- Quotations

4.0 Margins and Justification

Set the justification to “full” and the margins to the following measurements:

TOP : 1”
BOTTOM : 1”
LEFT : 1.5”
RIGHT : 1”

5.0 Pagination

The page-numbering format is standardized and **must be observed**. Alignment of all page numbers is on the **right** at the **bottom** of the page (footer).

- Preliminary pages.** Preliminary pages include all the sections that precede the text. They are arranged and numbered using small Roman numerals (i, ii, iii, etc.).
- Text pages.** Use format <page number>.
- Supplementary pages.** No pagination.

6.0 Use of Footnotes

Footnotes **MUST NOT** be used for citing references. They should be used only for useful extensions and excursions of information in the body of the text. Footnotes should be numbered consecutively with superscript numerals. Footnotes should be in single spacing, using font size 9-point.

7.0 Header and Footer

Alignment of the chapter or topic is on the **right at the top of page**, using font size 9-point.

Footer:

Alignment of the page numbers is on the right at the bottom of the page, using font size 9-point. The page number format:

- Roman numerals for preliminary pages.
- <Page Number> for text pages.
